Mackie

D700

Mackie

This guide shows you how to set up the D700 in all DAW programs that are not explicitly mentioned in a separate guide and support the well-known Mackie Control. With this preset the D700 works as a Mackie Control.

All files mentioned in this guide can be found on the USB drive, in the Asparion Configurator installation folder or on our website.

If you are having trouble with anything in this guide, please contact us via our website www.asparion.de/contact and we'll immediately help you.

If you are having trouble finding the mentioned windows and options, you should have a look at the manual of your DAW.

Step 1:

- Check if your software supports the **Mackie Control**
- Select the **Mackie** preset
  How to select a preset is described in the main manual.

Step 2:

- Open your DAW program
- Find the **Options** or **Preferences** window
- Go to **Control Surfaces, Midi Controllers** or **Midi** and enable **Mackie Control** while selecting **D700** as input and output

Step 3: (optional)

- If you want to connect more than one extension, you should redo step 2 but select **D700 (2)** and **Mackie Control Extender**
  If there is only one D700 showing up, you need to enable the extensions first. How you can do that is described in the main manual.
