# Quickstart Guide

1 ## Choose number of extensions

- Keep the three buttons [Pan] [EQ] [Send] on the main device pressed for about 5 seconds until both the LED rings (1 and 8) start blinking.
- Choose how many extensions you want to connect by rotating the left encoder (first).

Connect and arrange extensions **2**

- Connect the power supply as shown below.
- Keep the three buttons marked in red pressed for about 5 seconds until the eight „Select" buttons start blinking.
- Now, you can assign a position number to every extension by clicking the equivalent „Select" button. The button on the left leads to number one etc. Ensure that you use each number only once and that the D700FT also receives a number!
- After that you can connect the new extension with the link cable to the previous one.

Connection to previous extension
